

Omni Power Station 30C+

Power-as-a-Service - 2 year Full Battery Warranty + SmartCenter

Introducing Power-as-a-Service - Only from Omnicharge

The easiest, fastest, most flexible way to deploy mobile power to your users, when and where it's needed.

Uniquely Connected: Hardware/Software Combination

Power-as-a-Service from Omnicharge combines the power of our enterprise-grade Omni Power Stations and mobile power banks with a full-service battery warranty program and our powerful, cloud-based SmartCenter monitoring / analytics service into an easy to use, always available program.

Real time power station monitoring

Remotely monitor power station usage and see how your stations are being used in each venue. With real-time monitoring, you can optimize power station usage and maintenance.

Monitor power stations remotely

Track and secure all your Omnicharge

Usage analytics for optimal performance

Our complete dashboard gives you real-time monitoring, so you can control your fleet of stations, track user checkouts and activities, and keep track of power and battery health.

Customize your own rental plans

Manage each venue remotely

Enterprise friendly self-service checkout

Let your users check out chargers using the Omnicharge app. With self-service checkout, you can leave your stations unattended, and let the system manage your checkouts and returns with your own rental policies.

Track station health and status

Monitor checkouts and user activities

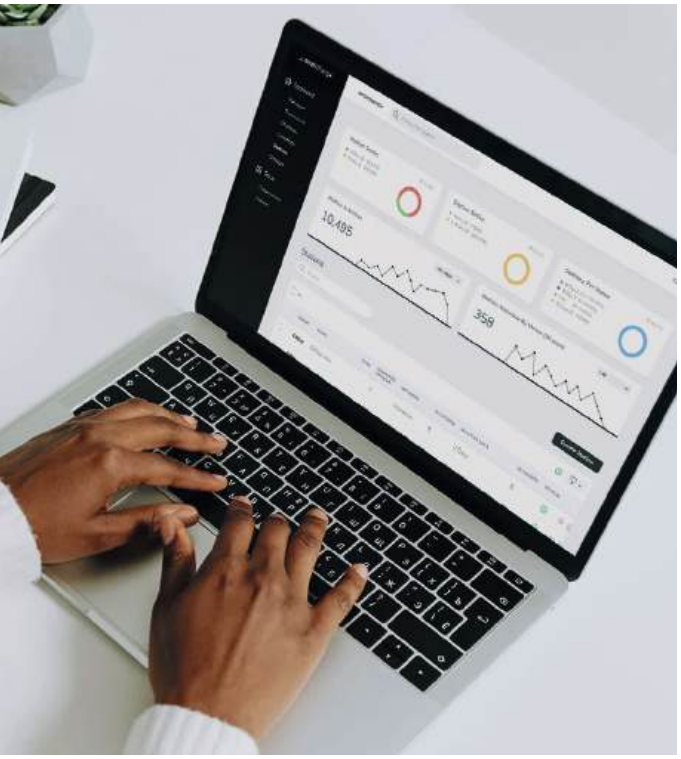

Uniquely Available:
Full Self-Service Checkout

Power Station administrators can choose when and how users are able to check out chargers. Through the Omnicharge app (a free download from the iOS App Store or the Google Play store), Station users can borrow chargers themselves at any time with just a few taps. Station administrators can choose to allow chargers to be borrowed for free, or can choose to charge rental fees, late fees, and/or replacement fees depending on the needs of the organization. Everything is handled securely through Omnicharge's SmartCenter cloud service platform.

Uniquely Powerful:
Charges Laptops and Everything Else

The Omni 30C+ charger at the heart of the Power Station is a uniquely powerful battery pack, holding a full 94Wh of capacity - enough to fully charge most 13" laptops. And with multiple ports, including two high-powered USB-C ports (100W Max), a 100W DC output, two 18W USB-A ports, and three wireless charging plates (3W/5W/10W) the Omni 30C+ charger has the ability to charge all of your devices - all at the same time.

Where all your power data comes together

Overview Dashboard
The overview dashboard provides you with all your analytics compiled together in one place.

Power Station Monitoring
Get in-depth information about your power stations. See their status information and activity levels, or view detailed information about individual stations.

Checkout Monitoring
Get a detailed overview of all your user checkouts and monitor activity levels over time.

Charger usage analytics
You can even get details down to the individual charger level. See the status of a charger, its history, and the number of checkouts. You can even get information like when a charger was last used.

Transaction Analytics
Get a detailed breakdown of all transactions that have occurred. With a full ledger of all transactions, you can link overdue checkouts to payments and even refund them through the dashboard.

Uniquely Supported: Full Service Warranty

Because all rechargeable batteries have a limited number of charge cycles and may eventually lose capacity over time, Omnicharge's Power-as-a-Service model has Power Station administrators covered by offering a full service battery warranty. Over a term of two years, Omnicharge and station administrators can monitor the performance of individual chargers, and Omnicharge will replace any chargers that fail during the course of normal usage (terms and conditions apply - see subscription agreement for full details).
